Career objective

Full Stack Web Developer specializing in the MERN stack, Next.js, and TypeScript, with hands-on experience building scalable full-stack web applications through personal and academic projects. Skilled in designing responsive user interfaces, developing secure RESTful APIs, and implementing authentication and authorization systems with a focus on clean, maintainable, and efficient code. Solid understanding of modern web development practices, API design, and system architecture fundamentals. Driven by problem-solving and continuously improving technical skills to build real-world, user-focused applications.

Technical Skills

Frontend: React.js (v19), Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS (v4), HTML5, CSS3

Backend: Node.js, Express.js, RESTful APIs, JWT (JSON Web Tokens)

Database & ORM: MongoDB, PostgreSQL, Prisma, Firebase

Platforms & Tools: Git, GitHub, Netlify, Vercel, Postman, Figma, WordPress

Key Concepts: Authentication & Authorization, CRUD Operations, Supply Chain Logic, Responsive Design, API Integration

Projects

Acadex | Note sharing Platform [live link](#) | [Frontend Code](#) | [Backend Code](#)

A classroom-focused academic collaboration platform designed to help students organize learning materials, share notes, and track engagement through a structured role-based system.

- Ensured smooth user experience with responsive UI and optimized state management across the application
- Implemented role-aware dashboard flows for students, class representatives (CRs), admins, and super admins.
- Developed a structured academic hierarchy supporting classrooms, subjects, folders, and notes for organized content management
- Integrated features such as note uploads, favorites, comments, approval-aware workflows, and leaderboard experiences.

Technologies: Next.js, React, TypeScript, Tailwind CSS, TanStack Query, TanStack React Form, Axios, Framer Motion, Zod, Radix UI

Retail Flow | POS & Inventory Management System [live link](#) | [Frontend Code](#) | [Backend Code](#)

A full-featured POS and inventory management system built to streamline retail operations, including procurement, stock control, and supplier payment management through an automated workflow.

- Engineered a multi-stage supply chain workflow where Purchase Orders (PO) are converted into Goods Received Notes (GRN), enabling automatic and consistent inventory updates
- Designed a scalable inventory system with warehouse, batch, and expiry management.
- Used TanStack Table for efficient handling and display of large operational datasets with sorting, filtering, and pagination
- Learned and applied proper codebase organization and file structure management practices to maintain a scalable and maintainable project architecture

Technologies: React.js, Node.js, Express.js, MongoDB, TanStack Table, Tailwind CSS

Easy Home | Real Estate Platform [live link](#) | [Frontend Code](#) | [Backend Code](#)

Full-featured real estate platform with separate role-based dashboards for users, agents, and admins.

- Implemented secure authentication using Firebase and JWT to support protected role-based access.
- Built wishlist and property offer workflows allowing users to explore, negotiate, and purchase properties.
- Created admin tools for property verification, fraud detection, and sales monitoring.

Technologies: React.js, Node.js, Express.js, MongoDB, Firebase Auth, JWT

Education

Bachelor of Science in Computer Science and Engineering

Uttara University

2025 – Expected Graduation: 2029

Language

Bengali: Native

English: Professional Working Proficiency
