Career objective

Results-driven Full-Stack Web Developer with hands-on experience building scalable and secure web applications using modern technologies, including the MERN stack, Next.js, and TypeScript. Strong foundation in designing responsive, user-focused interfaces and developing robust RESTful APIs. Passionate about writing clean, maintainable code and solving real-world problems through efficient system design, and seeking an entry-level opportunity to contribute to a collaborative development team while continuously growing as a software engineer.

Technical Skills

Frontend: React.js (v19), Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS (v4), HTML5, CSS3

Backend: Node.js, Express.js, RESTful APIs, JWT (JSON Web Tokens)

Database & ORM: MongoDB, PostgreSQL, Prisma, Firebase

Platforms & Tools: Git, GitHub, Netlify, Vercel, Postman, Figma, WordPress

Key Concepts: Authentication & Authorization, CRUD Operations, Supply Chain Logic, Responsive Design, API Integration

Projects

Acadex | Note sharing Platform [live link](#) - [Frontend Code](#) - [Backend Code](#)

Classroom-first study platform built for students to join classrooms, organize subjects and folders, upload notes, save favorites, and track leaderboard activity through a role-aware academic workflow.

- Built a modern frontend using Next.js 16, React 19, and TypeScript with a structured App Router architecture.
- Implemented role-aware dashboard flows for students, class representatives (CRs), admins, and super admins.
- Create a classroom, subject, folder, and note-based organization to support a clean academic content hierarchy.
- Integrated features such as note uploads, favorites, comments, approval-aware workflows, and leaderboard experiences.

Technologies: Next.js, React, TypeScript, Tailwind CSS, TanStack Query, TanStack React Form, Axios, Framer Motion, Zod, Radix UI

Store-Xen (POS & Inventory Management System) [live link](#) - [Frontend Code](#) - [Backend Code](#)

Comprehensive POS and inventory management system designed to streamline retail operations with procurement, stock management, and supplier payment workflows.

- Engineered a multi-stage supply chain workflow where Purchase Orders (PO) convert into Goods Received Notes (GRN), automatically updating inventory.
- Designed a scalable inventory structure supporting warehouse tracking, batch numbers, and expiry dates for accurate stock control.
- Implemented supplier payment tracking for partial and full payments with clear financial workflow visibility.
- Used TanStack Table for efficient sorting, filtering, and pagination of large operational datasets.

Technologies: React.js, Node.js, Express.js, MongoDB, TanStack Table, Tailwind CSS

Easy Home (Real Estate Platform) [live link](#) - [Frontend Code](#) - [Backend Code](#)

Full-featured real estate platform with separate role-based dashboards for users, agents, and admins.

- Implemented secure authentication using Firebase and JWT to support protected role-based access.
- Built wishlist and property offer workflows allowing users to explore, negotiate, and purchase properties.
- Created admin tools for property verification, fraud detection, and sales monitoring.

Technologies: React.js, Node.js, Express.js, MongoDB, Firebase Auth, JWT

Education

Bachelor of Science in Computer Science and Engineering

Uttara University

2025 – Expected Graduation: 2029

Language

Bengali: Native

English: Professional Working Proficiency
